## 1. Purpose

The purpose of this report is to identify, evaluate, and manage information security risks associated with third-party vendors and service providers supporting the Odisha e-Registration System and Aadhaar e-KYC Authentication infrastructure.

This assessment ensures that vendors having access to Aadhaar-related infrastructure, services, or information comply with organizational security policies and UIDAI Aadhaar Authentication Regulations.

## 2. Scope

This assessment covers all third-party organizations providing services related to:

- Hosting Infrastructure
- Network Connectivity
- Aadhaar Authentication
- SMS Services
- Email Services
- Payment Services
- Security Audit
- Application Support
- Managed Infrastructure Services

## 3. Objectives

The objectives are to:

- Identify security risks associated with vendors.
- Evaluate confidentiality, integrity, and availability risks.
- Assess compliance with contractual and regulatory obligations.
- Verify implementation of appropriate security controls.
- Recommend mitigation measures.
- Ensure compliance with UIDAI security requirements.

## 4. Assessment Methodology

The assessment follows these steps:

1. Identify vendors.
2. Determine services provided.
3. Assess access to Aadhaar ecosystem.
4. Identify security risks.
5. Evaluate likelihood and impact.
6. Review existing controls.
7. Determine residual risk.
8. Recommend mitigation actions.

## 5. Vendor Assessment Criteria

The following parameters were evaluated:

- Nature of Services
- Access to Aadhaar Systems
- Access to Aadhaar Data

- Confidentiality Agreement (NDA)
- Logical Access Control
- Physical Security
- Security Certifications
- Incident Management Process
- Business Continuity
- Patch Management
- Access Review
- Compliance with UIDAI Guidelines

## 6. Vendor Risk Assessment

### Vendor 1 – Odisha State Data Centre (OSDC)

| Particular                    | Details                   |
|-------------------------------|---------------------------|
| Service                       | Hosting Infrastructure    |
| Access to Aadhaar Application | Yes                       |
| Access to Aadhaar Data        | Infrastructure Level Only |
| Risk Rating                   | Medium                    |

#### Risks

- Infrastructure outage
- Hardware failure
- Unauthorized physical access
- Network disruption

#### Existing Controls

- Tier III Data Centre controls
- 24x7 monitoring
- Biometric access
- CCTV surveillance
- Fire suppression systems
- Redundant power
- Network redundancy

#### Recommendations

- Continue periodic infrastructure security reviews.
- Review access logs quarterly.
- Verify backup restoration periodically.

Residual Risk: **Low**

### Vendor 2 – UIDAI

| Particular                    | Details                 |
|-------------------------------|-------------------------|
| Service                       | Aadhaar Authentication  |
| Access to Aadhaar Application | API Integration         |
| Access to Aadhaar Data        | Authentication Services |
| Risk Rating                   | Low                     |

### Risks

- Authentication service outage
- API changes
- Certificate expiry

### Existing Controls

- Secure API integration
- Digital certificates
- TLS encryption
- UIDAI-approved authentication mechanisms

### Recommendations

- Monitor certificate validity.
- Track UIDAI advisories.
- Validate API compatibility after updates.

Residual Risk: **Low**

### Vendor 3 – OCAC

| Particular                    | Details                       |
|-------------------------------|-------------------------------|
| Service                       | MPLS VPN / OSWAN Connectivity |
| Access to Aadhaar Application | Network Connectivity          |
| Access to Aadhaar Data        | No                            |
| Risk Rating                   | Medium                        |

### Risks

- WAN connectivity failure
- Latency
- Network interruption

### Existing Controls

- MPLS VPN
- Secure routing
- Network monitoring
- Incident response procedures

### Recommendations

- Quarterly connectivity review.
- Maintain escalation procedures.
- Verify redundancy where available.

Residual Risk: **Low**

### Vendor 4 – SMS Gateway Provider

| Particular                    | Details      |
|-------------------------------|--------------|
| Service                       | OTP Delivery |
| Access to Aadhaar Application | Yes          |
| Access to Aadhaar Data        | No           |
| Risk Rating                   | Medium       |

### Risks

- SMS delivery failure
- OTP delay
- Service interruption

### Existing Controls

- Secure API
- TLS encryption
- Monitoring
- SLA commitments

### Recommendations

- Monitor SMS delivery reports.
- Conduct periodic SLA reviews.

Residual Risk: **Low**

### Vendor 5 – Email Gateway Provider

| Particular                    | Details             |
|-------------------------------|---------------------|
| Service                       | Email Notifications |
| Access to Aadhaar Application | Limited             |
| Access to Aadhaar Data        | No                  |
| Risk Rating                   | Low                 |

### Risks

- Email delivery delays
- Unauthorized email relay

### Existing Controls

- Secure SMTP
- TLS encryption
- SPF/DKIM/DMARC (if applicable)

### Recommendations

- Periodically review email logs.
- Monitor service availability.

Residual Risk: **Low**

### Vendor 6 – Payment Gateway

| Particular                    | Details        |
|-------------------------------|----------------|
| Service                       | Online Payment |
| Access to Aadhaar Application | Integrated     |
| Access to Aadhaar Data        | No             |
| Risk Rating                   | Medium         |

### Risks

- Payment transaction failure
- Service downtime
- API failure

### Existing Controls

- Secure payment APIs
- TLS encryption
- Transaction monitoring

### Recommendations

- Review gateway logs.

- Validate payment reconciliation.

Residual Risk: **Low**

#### Vendor 7 – Cyber Security Audit Agency (Cybernerd)

| Particular                    | Details                                   |
|-------------------------------|-------------------------------------------|
| Service                       | Vulnerability Assessment & Security Audit |
| Access to Aadhaar Application | Temporary Authorized Access               |
| Access to Aadhaar Data        | Restricted                                |
| Risk Rating                   | Low                                       |

#### Risks

- Unauthorized disclosure of findings
- Misuse of temporary credentials

#### Existing Controls

- NDA executed
- Limited-time access
- Access approval process
- Access revoked after audit completion

#### Recommendations

- Verify credential removal after audit.
- Retain audit reports securely.

Residual Risk: **Low**

## 7. Vendor Risk Summary

| Vendor                      | Overall Risk | Residual Risk |
|-----------------------------|--------------|---------------|
| OSDC                        | Medium       | Low           |
| UIDAI                       | Low          | Low           |
| OCAC                        | Medium       | Low           |
| SMS Gateway                 | Medium       | Low           |
| Email Gateway               | Low          | Low           |
| Payment Gateway             | Medium       | Low           |
| Cyber Security Audit Agency | Low          | Low           |

## 8. Risk Treatment Plan

The following controls are implemented for third-party risk management:

- Vendor Security Assessment before onboarding
- Non-Disclosure Agreements (NDA)
- Access approval process
- Least privilege access
- Annual security review
- Compliance verification
- SLA monitoring
- Incident reporting requirements
- Access revocation after contract completion
- Periodic security audit

## 9. Monitoring & Review

Third-party risks are monitored through:

- Annual vendor risk assessment
- Quarterly service review meetings
- Security audit observations
- SLA monitoring
- Incident management reviews
- Change management process
- Periodic access reviews

## 10. Conclusion

The assessment concludes that third-party vendors supporting the Odisha e-Registration System have been evaluated for information security risks based on the services provided and their level of access to the Aadhaar authentication ecosystem. Appropriate administrative, contractual, technical, and operational controls have been implemented to minimize risks associated with third-party involvement. The organization will continue to perform annual vendor risk assessments, monitor vendor performance, review access privileges, and ensure compliance with UIDAI Aadhaar Authentication Regulations and organizational information security policies.

## 11. APPROVAL

**Prasanta Kumar Samal**  
(TPOC)

**Rashmi Mohanty**  
(Project Head)

**Sujay Kumar Pati**  
(MPOC)
